

Adeesha - Campus Projects

Project 1: Campus Event Management System

A full-stack web application for managing university events, registrations, and attendance tracking.

Tech Stack: Django, PostgreSQL, React, Docker

Features:

- Event creation and management
- Student registration and QR code check-in
- Real-time attendance tracking
- Analytics dashboard for organizers
- Email notifications and reminders

Team Size: 4 members

Role: Backend Lead

Duration: 4 months

Grade: A+

Project 2: Distributed File Storage System

A Google Drive-like file storage system with chunking, replication, and fault tolerance.

Tech Stack: Go, gRPC, Redis, MinIO

Features:

- File upload/download with chunking
- Data replication across nodes
- Automatic failover and recovery
- Access control and sharing permissions
- Web interface for file management

Team Size: 3 members

Role: System Architect

Duration: 3 months

Grade: A

Project 3: Real-time Chat Application

A WhatsApp-like messaging app with end-to-end encryption.

Tech Stack: Node.js, Socket.io, MongoDB, React Native

Features:

- Real-time messaging with WebSocket
- End-to-end encryption (Signal Protocol)
- Group chats and media sharing
- Online status and read receipts
- Message search and archive
